

## High Cycle Scissor Lift Keeps Ornamental Fence Production on Schedule

### Features and Benefits

A complete high cycle package including:

- Cam followers with sealed tapered roller bearings
- Replaceable hardened runner strips
- Special "PTFE" filament wound bearings in all pivot points
- A 15HP continuous running power unit for lift and lowering speeds of 5 seconds
- Double acting cylinders allow the lift to be powered up and down with extreme durability

### High Cycle Series 35 Scissor Lift

#### The Challenge

Ameristar is the largest manufacturer of residential, commercial, industrial and high-end architectural metal fencing. When their existing scissor lift started to fail at their fast pace production facility in Tulsa, OK. - speed of production slowed down. It was becoming difficult to keep the scissor lift operational for transferring empty jigs up to workers to load fencing material for the next step in the welding process.

#### The Autoquip Solution

This project was brought to us by our dealer, Cisco Eagle who worked with the customer to determine their needs and expectations for the application. They wanted to make sure they invested in a high quality, fast performing scissor lift that would provide long-lasting service and stand up to the high production demands

In Position.
