

“Continental Air uses total floor space with LOUDEN multiple runway crane”

**Features and Benefits**

No Floor Obstructions

Inverter Controlled

Interlocking Maintenance Spurs

**Industry Group:** Monorail Manufacturers Association, Inc. (MMA)

*“The LOUDEN crane operates very smooth and precise.”*

This 4-runway custom designed LOUDEN crane system is equipped with inverter control on all motions. Utilizing the multiple runway design allows complete floor coverage with a 200 ft crane span.

Continental Air wanted to keep the height of their building a low as possible to control costs. Therefore, by using the multiple runway crane design we were able to use a smaller bridge beam on the crane and still meet Continental's capacity requirements; thus maintaining Continental's building requirements.
