

Tarca® System Helps Save Valuable Floor Space

Features and Benefits

Business: Heavy Truck Repair & Maintenance

Product Type: Free Standing Tarca® Patented Track System

Industry Group: Monorail Manufacturers Association, Inc. (MMA)

Industry: Heavy Truck Maintenance and Repair

Application:

This company provides maintenance and customization for heavy trucks. Parts weighing from 1 to 3 tons are lifted and moved about 25 ft. across the building to a staging area where maintenance is done.

Gorbel® Solution:

A 3 Ton completely Free Standing Tarca® System with 28' bridge, 39' runway, 16' Height Under Boom, and 37' support centers.

The Problem:

- Fork Trucks were not a safe way to lift and move truck parts weighing between 1 Ton and 3 Tons.
- Floor space needed to be maximized to make room for trucks and parts
- Company was looking for something that could be

moved if needed Why Patented Tarca® Track Was The Smart

Solution:

- The system is not braced to the building and therefore, can be relocated if the need ever arises.
- Because the system is free standing and the supports are close to the building walls, it allows room in the facility for safe movement and storage of trucks and parts.
- Using the crane system is much safer than using fork trucks in the facility.
