Patented track evolved from re-rolled old railroad rails for handling materials in cattle barns. As loads became heavier and service requirements became more exacting, the need arose to develop track to carry heavier loads over longer spans with a better rolling surface.

Interesting Fact:
Patented Track and Enclosed track cranes and monorail systems can be provided as manual, powered, semi-automatic or fully automatic systems. They can be installed in very sophisticated integrated lifting systems and can be equipped with hoists, vacuum lifters, and manipulators.

MMA members are the industry leaders who are committed to providing safe, efficient overhead systems that meet the performance requirements of manufacturing applications.

Customers can confidently purchase and derive superior value from the industry experts. Patented track and enclosed track systems with the MMA Certified Label, have been certified by a 3rd party Professional Engineer (PE) to meet specific ANSI standard requirements.

Customer Benefits
- Increased Manufacturing Performance and Throughput
- Efficient Load Handling
- Accurate Positioning of Loads
- Improved Ergonomics
- Improved Worker Safety
- System Flexibility
- Lower Cost of Ownership
- Maximum Use of Floor Space

Types of Products
- Patented Track Underrunning Crane and Monorail Systems
- Enclosed Track Workstation Cranes and Monorails

Industries Served
- Automotive
- Aerospace
- Glass
- Bricks
- Government, Defense
- Ship Building
- Printing
- Food and Beverage
- Industry
- Petrochemical
- Chemical
- Aerospace
- Glass
- Automotive

Monorail Manufacturers Association (MMA) members are the leading providers of overhead monorail systems. The members of MMA design, manufacture, assemble, install and service a wide variety of patented track underrunning cranes and monorail systems.

Monorail Manufacturers Association (MMA) members are the leading providers of overhead monorail systems. The members of MMA design, manufacture, assemble, install and service a wide variety of patented track underrunning cranes and monorail systems. They produce and install thousands of systems annually in the largest to the smallest manufacturing facilities throughout North America.

MMA operates through committees with programs adopted by the membership. Its many activities include an active engineering committee and the promotion of safe product use. MMA is represented on a number of standards developing committees and actively supports the development and certification of safety standards by the ANSI consensus method. (ANSI MH27.1 & ANSI MH27.2)

MMA members are the industry leaders who are committed to providing safe, efficient overhead systems that meet the performance requirements of manufacturing applications.

MMA members are committed to providing products which focus on safety, innovation and on delivering the proper solution for the required duty and performance which provide maximum benefits to our customers.
