

Protective Guarding Checklist

- Are pedestrian aisle ways defined and physically separated from industrial vehicle traffic conveyors and robotic equipment?
- Is perimeter guarding installed around automated equipment and does it meet guidelines published by OSHA or the Robotic Industry of America?
- Are overhead conveyers guarded so that falling objects will be safely contained?
- Are rack and shelving systems guarded to prevent loose objects from falling into walkways, work areas, or flues?
- Are material handling entry points to fixed equipment and work cells properly guarded from vehicle traffic?
- Are pallet rack uprights in high traffic areas, tunnel bays, or end of rows protected from impact?
- Are building columns in high vehicle traffic areas properly protected?
- Do mezzanines, elevated work platforms, and load/unload areas have proper guarding to prevent people or products from falling?
- Are shipping docks protected from damage, falls, or unauthorized entry?
- Are vertical ladders protected from falls?
- Are fixed structures such as racks, in-plant offices, electrical equipment, or sprinkler main lines protected from industrial vehicle traffic?
- Are personnel in designated work cells isolated from vehicle traffic?
