

Protective Guarding Checklist

- 1. Are pedestrian aisle ways defined and physically separated from industrial vehicle traffic conveyors and robotic equipment?**
- 2. Is perimeter guarding installed around automated equipment and does it meet guidelines published by OSHA or the Robotic Industry of America?**
- 3. Are overhead conveyers guarded so that falling objects will be safely contained?**
- 4. Are rack and shelving systems guarded to prevent loose objects from falling into walkways, work areas, or flues?**
- 5. Are material handling entry points to fixed equipment and work cells properly guarded from vehicle traffic?**
- 6. Are pallet rack uprights in high traffic areas, tunnel bays, or end of rows protected from impact?**
- 7. Are building columns in high vehicle traffic areas properly protected?**
- 8. Do mezzanines, elevated work platforms, and load/unload areas have proper guarding to prevent people or products from falling?**
- 9. Are shipping docks protected from damage, falls, or unauthorized entry?**
- 10. Are vertical ladders protected from falls?**
- 11. Are fixed structures such as racks, in-plant offices, electrical equipment, or sprinkler main lines protected from industrial vehicle traffic?**
- 12. Are personnel in designated work cells isolated from vehicle traffic?**
