

Motorcycle Manufacturer Increases Productivity with Multiple Pentalift Application Designed Hydraulic Lift Tables

Features

- Positions Motorcycle in the most ergonomically correct position during assembly.
- Lift Table can be operated from either side during assembly process.
- Lift Table features safe reliable DC operation with On Board re-charging capabilities.

The worlds most recognized name in Motorcycles built a new manufacturing facility that required portable lifts for use during the assembly of their product. There are well over 100 of these identical units installed on a continuous “tow line” application. The frame assembly is first positioned on the portable lift table.

As the lift table moves down the production line, the operators raise, lower or rotate the motorcycle assembly into the most ergonomically correct position to facilitate the next step of the assembly process.

For operator convenience the lift tables can be operated from either side. The power unit is a rechargeable DC system complete with an On-Board 115/1/60 Charger.
