

Eliminate Packages Slipping on Rollers

Are you facing any of the following issues on your rollers?

- package skewing or slipping
- decrease in throughput
- missorts
- decrease in productivity

If your answer is “Yes” to any of the above, Habasit can help you.

Habasit’s abrasion resistant rubber covered or Polyurethane elastic belts can be "pre-tensioned" by a given amount so that they can be easily applied to rollers. This solution can help prevent package skewing or slipping on rollers, which can lead to missorts down the line and decreased throughput.

Features and Benefits

- Abrasion resistant covers : *long belt life*
- Constant positive grip : *prevents slipping or skewing*
- Dimensionally stable : *high throughput and uniform performance*
- Elastic : *quickly installed*
- Non-marking covers : *no scratches or black marks on packages*

Belt	Cover material	Min. pulley diam.	Thickness	Tensile Force
MAB-02	TPU	10 mm (0.4")	1.1 mm (0.04")	2.6 lbs./in. for 3% elongation
MAT-02H	NBR	15 mm (0.6")	1.4 mm (0.06")	1.9 lbs./in. for 3% elongation
WVT-125	TPU	15 mm (0.4")	1.2 mm (0.06")	3 lbs./in. for 3% elongation
