

INTRALOX SORTER GOES BI-DIRECTIONAL

The DARB™ Sorter S4550, part of the Intralox Activated Roller Belt™ (ARB™) line of equipment, delivers the high rates and compact footprint of its predecessor, the DARB S4500, but delivers these benefits bi-directionally.

The bi-directional Dual-Activated Roller Belt (DARB) Sorter S4550 enables right-angle sorting at rates up to 200 packages per minute, with higher rates possible depending on package size. It can both receive and sort packages on the same machine. Other benefits include:

- Bi-directional 90-degree sorting
- Enables tight divert spacing and an overall compact footprint
- Specializes in applications above 30 packages per minute

For more than 10 years, patented Activated Roller Belt™ (ARB™) technology has met the demands for efficient and reliable conveyance systems, while managing amplified throughput within a small footprint. More than 4,000 ARB installations globally have decreased overall project costs and added functionality for our customers by filling the gaps in their line layouts.
