

PROTECT-IT™

Column & Pallet Rack Protection

- Improves safety and protects your investment
- Low purchase and installation costs
- Securely grips the column with no separate fasteners needed
- Effective in cold storage as low as -40 degrees
- No tools required for installation
- Single units can be replaced if damaged, greatly reducing replacement costs

133 Series
5.25" high

PRODUCT SHEET

Protect-it™ offers exceptional performance in pallet rack protection. Warehouse rack damage is a major occupational health and safety issue. Pallet racking is not designed to be struck by forklifts. Even low speed collisions can lead to structural damage that is costly to repair and places workers at risk. The **Protect-it™** product line offers a solution to suit most brands and column sizes sold in the USA.

Protect-it™ consists of an outer wall that is integrally moulded to a series of curved "spring like" energy absorbers at the front and sides to provide two levels of protection for columns. Under light to moderate impacts, the outer wall deforms to resist the impact then **Protect-it™** returns to its original shape. Under higher impacts, the outer wall deflects even more, contacting the energy absorbers and delivering increased impact absorption.

Part Number	Size	Weight
401-211	3"x3" Column	1 lb. per unit
401-311	3"x1-5/8" Column	1 lb. per unit
Recommended 3 Units per column Sold in Cartons of 12 Offered in Yellow only		

Protect-it™ is made with a super tough grade of corrosion and moisture resistant HDPE thermoplastic. This special material has a reputation throughout the world for impact strength in a wide range of extreme environments. **Protect-it™** is also injection moulded enabling use of a very durable plastic material.
