

Custom Fabricated Components

American Crane can manufacture custom fabrications and parts specific to your requirements.

Manufacturing Capabilities include:

- Procurement of materials of various forms and material types
- Extensive machining capabilities
- Welding by certified welders
- Nondestructive testing capability

Have a need for a custom fabrication or part that you either do not have time or expertise to design? American Crane's highly qualified engineering department can design innovative solutions that can be translated into drawings and manufactured fabrications and parts.

American Crane has been required over the years to create unique design and manufacturing solutions to support our custom crane manufacturing program. This same expertise can be used to design and manufacture almost any welded fabrication or machined part that can be imagined.

American Crane's unique custom fabricated components program includes the following capabilities:

- Use of the latest 3-D Design Software
- Fabrication and part testing capabilities
- Quality Assurance Program
- Inspection reports available, when required
- Independent product testing, when required

American Crane has the experience and expertise to meet your unique requirements and to move quickly from design concept to manufacturing.
