# HEALTH CHECK

Optimize Performance of your  
Productivity Solutions and  
Reduce Unplanned Downtime

**Customized Support** – We prepare a custom maintenance checklist for your equipment to ensure everything is functioning properly.

**Expertise on Site** – Our service technicians have years of expertise in our equipment and its application on your equipment.

**Minimization of Downtime** – Service technicians make high-level repairs on site and detail recommendations for further repairs or equipment upgrades in a comprehensive post-trip report minimizing surprises and the cost of unplanned downtime.

Lost productivity caused by unplanned failure or non-optimal performance of your productivity assets can cause significant impacts on operations and profitability. The Laird Health Check brings our expertise to your site to provide a full assessment of the health of your equipment. All Health Checks include:

## CUSTOMIZED INSPECTIONS

Our Engineering and Service teams build a comprehensive inspection checklist customized to your equipment and application. Service Technicians will then use the checklist to conduct the inspection to ensure that your equipment is properly installed, show no signs of excessive wear, and is operating with maximum efficiency and reliability.

## HIGH-LEVEL TROUBLESHOOTING AND REPAIR

Any repairs that can be done on site will be performed.

## COMPREHENSIVE TRIP REPORT

Following the visit, you will be given a comprehensive trip report detailing all inspections conducted, repairs performed, and recommendations for improvement. If your equipment is under warranty, Laird will schedule repairs on any affected equipment.
