

Smart Technology. Delivered.

WIRELESS AUTOMATION CONTROL SOLUTIONS

TRAINING PROGRAMS

The knowledge your technical staff need delivered the way you want it.

We understand that training can be the difference between efficient safe operations and costly downtime. Laird has designed training classes to meet a variety of different needs. We offer training courses at our newly completed training center in Warren, OH or at your site depending on your preference. We offer general training classes and courses customized to your specific equipment. Everyone that completes a training program will receive a certificate for attending the class along with technical material to help your staff in supporting the product(s). We will also track certifications to help you decide when it is time to schedule another training course.

TRAIN THE TRAINER

All courses are available in Train the Trainer style sessions. Participants will learn the concepts they need to successfully deliver the training to your staff.

Course #303 | Mining Machine Control System-Level Troubleshooting

Custom Training

SYSTEM ORIENTATION CLASSES

System Orientation classes are customized specifically for the equipment you have installed and are designed to give an introduction to the first time user of a new system or application or as a review for existing users.

SYSTEM-LEVEL TROUBLESHOOTING CLASSES

System-Level Troubleshooting classes include hands-on training for troubleshooting & repair of all the individual components used in our products. An overview of available parts to be used in first-responder repairs is also included in the training. This class is recommended for those individuals responsible for maintaining the remote control system and its interface to the equipment that it is controlling.

*Board-Level training may be available on request.

CUSTOM TRAINING

We can create training sessions fully customized to meet your business needs and learning requirements.
