

Yamato Packing Services

Improve Processes with Pallet Dimensioning

Yamato Packing Service Co. Ltd. was established in 1947 as a packaging company for commodity export. Today the company provides a new type of logistics service for its clients. In the current economic climate, companies are seeking the best solutions that enhance performance and save money in the long run. In response to their customers' needs, Yamato Packing Service installed a system that would do just that.

To improve processes and save money, Yamato Packing invested in the CSN840 Pallet™ Data Capture Solution from METTLER TOLEDO. The system gathers the dimensions, weight and identification of cargo and is used by the company to verify the size of their exports for correct invoicing and optimized resources.

Easy Integration with Customer System

The cargo is transported via an automatic robot transport machine called the 'tug cart'. The CSN840, which is installed over a truck pit, then scans all the goods that come into the factory. Weight, dimensions and ID are transferred to the company's own web system. Based on this information invoices are generated by the company's document creation and material flow tracing system, 'EASY'. The progress can be monitored by the client through the web anytime, anywhere. Yamato has a patent (pending) on the EASY total solution system.

Improved Operational Efficiency

The company have noticed dramatic improvements in their operations since installing the CSN840. Mr Tetsuya Egashira, President of Yamato Packing Services informed us that operating efficiency has improved up to 20%, greatly benefiting their clients.

Generating Revenue

By automating the measuring process Yamato has optimized their revenue potential. In fact, the machine is already paying for itself in terms of saved revenue. What's more, customers are ensured improved services and accurate invoices.

Improvement	Impact
Automatic Measuring of Goods	Reliable results Reduced need for labour
Data sent directly to database	Database integrity Time saved
Automatic generation of invoices	Time and labour saved No human error Improved customer trust

The Deciding Factor

When choosing a product to improve their processes, the company was drawn to METTLER TOLEDO because of the robustness, reliability and read-rates of the CSN840 Pallet™. This combined with our quick and reliable local service capabilities were the deciding factors for choosing our product.

Accurate, Repeatable Results

The CSN840 Pallet™ is approved according to international weights and measures standards making it suitable for legal for trade applications. With impressively high read rates and accuracy the CSN840 Pallet™ is used by transport and logistics companies around the world for revenue protection and the automation of pallet handling.
