

SELECTOR PRO

► **VOICE NAVIGATION**

FOR HEADS UP OPERATION

► **BARCODE SCANNING**

FOR LOCATION AND PRODUCT VALIDATION AND THE CAPTURE OF GS1 PRODUCT TRACKING INFORMATION

► **HANDS FREE OPERATION**

MULTIMODAL, MULTI-USE DEVICE THAT OFFERS ADVANCED VOICE, KEYBOARD AND TEXT FEATURES

Voice Guidance

ADDRESSING THE NEEDS OF FAST PACED PICKING OPERATIONS WITH ACCURACY AND HANDS-FREE TECHNOLOGY

Systems Application Engineering, Inc. (SAE) a leader in picking solutions technology has once again developed a revolutionary technology solution that is changing how the picking industry works.

Helping you achieve your performance goals

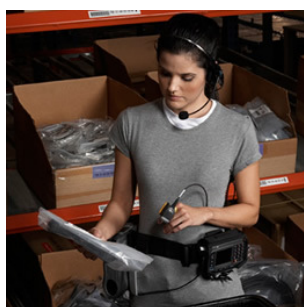

SAE's Voice Guidance enabled picking solution **SELECTOR PRO** is changing the game once again. Our patent pending Voice Guidance Picking System provides order selectors with navigational and line item picking instructions through voice directed technology.

The Voice Guidance feature is an enhancement to SAE's Selector Pro Voice System that is based on SAE's multiple U.S. Patents covering voice selection with scanning, mobile printing and RFID technology.

Get all the features of latest voice technology without the hassles and problems of voice recognition. By the way, who wants to talk all day anyway?

Picking operations are controlled with a simple click of the scanner button. If additional information is needed it is readily available to the selector on the easy to read display.

To learn more about this groundbreaking technology, please call us at 713-783-6020 / sales@saesystems.com

Are you PTI Compliant?

With SELECTOR PRO you can scan each GS1 case barcode during your picking process and capture the GS1 product traceability information. If you handle produce, SAE has an innovative process that can help you track GS1 information.
