

A Hot Problem

Century Metals & Supplies, Inc. employees in Miami Gardens, Florida continuously complained about the heat and the excessive amount of sweating that occurred while working in the 60,000 sq. ft. facility during the spring and summer months. With limited windows and numerous stationary floor fans proving to be unsuccessful, the facility needed an air movement solution to boost morale and productivity, and to mitigate their condensation issues.

A Breezy Solution

Three 24-ft diameter Big Ass Fans were installed in the packaging and processing areas of the Century facility. These industrial fans evenly distribute massive amounts of air throughout large spaces to keep facilities cool, reduce condensation and keep everyone comfortable year-round.

Cool Results

The energy efficient Big Ass Fans replaced numerous inefficient floor fans to create steady, continuous airflow to keep occupants cool and reduce condensation on products. Ridding the facility of stagnant air provides employees with a more comfortable work environment during hot spring and summer months. The once hot, muggy environment has been replaced with a more comfortable, content and productive one.

"Our fans work great, it's truly amazing the strength they have and the amount of air they move. You can really feel it when you walk into the area because the air just spreads all over and we no longer have complaints from our employees."
