

The Lapeyre Stair Advantage:

Every order includes 30+ years of building code expertise

Our product line incorporates flexibility and interchangeability of components into the engineering design to meet the access requirements of various laws, standards, and building codes applicable both locally and globally. By offering products that can be selectively configured, Lapeyre is able to provide cost-effective design alternatives capable of meeting most United States and International laws, standards, and building codes as described in their current or most recently issued editions.
