

STRETCH WRAPPERS

ARPAC stretch wrappers are used to pack, stabilize and protect the valuable product on your pallet to ensure it arrives safely at customer's destination.

Semi-automatic: Operator attaches film and activates cycle start button. The machine runs the cycle without operator intervention.

Automatic: Push button, lanyard or photo eye activated - no operation interface. The machine attaches the film, wraps the load and cuts and seals the film automatically. Fully-automatic machine is photo eye activated.

All turntable models can be high profile - HP (loaded by fork truck) or low profile - LP (loaded using pallet jack if optional ramp is purchased).

Semi-Automatics
