

Total Control. Total Value. TotalTrax.

SX/VX Advanced Telematics Platform

Today, a telematics system has to do more than deliver safety and productivity improvements. It has to adapt to changing needs and expand easily to support a longer life cycle. It must provide not only meaningful data, but real time business intelligence as well. It's got to be simple to install, use, and maintain. Finally, it should be backed with world-class support.

The powerful TotalTrax SX/VX advanced telematics platform meets the needs of material handling operations in the most flexible way possible.

Driven by software, the SX/VX platform is the most expandable and intuitive telematics solution in the industry. Choose only the features you need, including comprehensive cloud-based services from TotalTrax. Get all the data you want. Analyze it, share it, drill down, and generate reports that help you control costs, improve safety, and maximize productivity of your vehicles, labor, and warehouses. Run diagnostics remotely to simplify service and maximize fleet uptime.

From traditional capabilities such as impact detection, driver access control, and pre-shift inspection checklists, to advanced functions like load sensing and job tracking, TotalTrax SX/VX gives you more advanced information management, reporting, and analysis tools than any other system. It doesn't just make your equipment smarter; it gives you comprehensive control over your entire operation and outstanding economic value from your telematics investment.

SMART TRUCKS ARE JUST THE START

Power for today, expandability for tomorrow

The innovative SX200 software, developed specifically for the material handling industry, is at the core of the platform. It enables new functionality and a more intuitive user experience on the VX hardware. The platform includes industry leading data, reporting, and analytic management tools from Logi Analytics® as well as the extensive data hosting expertise of RackSpace®. Remotely monitor, diagnose, troubleshoot and reboot your units to make sure that vehicles are back online as soon as possible.

The TotalTrax SX200 software allows the platform to readily accommodate new applications and upgrades. No more replacing obsolete hardware or learning a new operating system to gain additional functionality. Features and support options are customizable to your operation, delivering only what each site needs. Easy to use, flexible, and automatically updatable via the cloud, SX200 software delivers maximum life cycle and ROI.

The robust data analysis tool in the SX200 software provides immediate graphical views of your operating data.

SOLUTIONS TO MANAGE YOUR DATA

Cloud Data Hosting

- World class secured and backed-up data center
- 24x7x365 monitoring and access to Cloud Engineers
- Proactive mitigation of new risks and threats
- Software updates managed automatically

Reporting Tools

- Large selection of predefined or easily customized reports
- Enhanced sort, filter and drill down features
- Easy viewing of data as charts and graphs
- Exportable to PDF, Excel or CSV files

Site Privatization

- Manage data access and reporting at all levels
- User login privileges by site and individual
- View data, run reports, & modify settings for any site
- Manage multiple sites from single local or hosted server

Business Intelligence Analytics

- Customizable dashboards by site and enterprise
- Integration into other management software applications
- Create exception alerts vs KPI's
- Monitoring and analysis available for cloud hosting users

SX200 Software

- **Flexibility** – a single platform delivers your choice of features, site to site
- **Upgradability** – add or change functionality via simple software downloads
- **Interoperability** – easily share data between management platforms for better analytics
- **Data Management, Reporting, Analytics** – leverage Logi Analytics tools to extract higher value from data; manage access and reporting at local and enterprise levels; via hosted or dedicated local server
- **Open Architecture** – seamless integration of future applications, including real time locationing systems like Sky-Trax™
- **Reverse Compatibility*** – integrates with existing EquipManager® or Impact Manager® installations; EquipCommand® software can be upgraded to SX200 to gain new data management and reporting tools

Additional Functionality

- **Load Sensing** – measure time and distance traveled with and without loads to help right-size your fleet and labor
- **Job Tracking** – track up to 225 tasks; improve labor standards and productivity
- **Multilingual Capabilities** – user interface and all management reports appear in preferred language at log-in (English, Spanish, German, or French Canadian)
- **Enhanced Standard Functions** – impact detection and activity monitoring, including optional integration of multiple sensors, more badge reader options for driver access control and automated safety checklists

Built to be used. Built to last.

TotalTrax VX hardware can handle the realities of everyday use in the material handling industry.

Built using state of the art components and incorporating 20 years of customer feedback, the ruggedized VX100 and VX200 deliver improved reliability and enhanced functionality. The units are more intuitive and easier for operators to use. The user interface, currently available in English, French Canadian, Spanish and German, can be programmed in any language. Each operator's preferred language automatically appears at log-in. The modular design is simpler to install and service and easy to upgrade, delivering the longest useful life in the industry.

VX200

The VX100 can be integrated with your existing VMT.

The Power of The Cloud

The SX/VX platform was designed to take advantage of all the benefits of cloud hosting technology.

You can be confident that your data is secure and backed-up 24/7/365. TotalTrax offers a flexible suite of options, including access to cloud experts trained on the platform, who can help ensure that the software always runs at peak performance. Choose from simple baseline unit monitoring, remote diagnostics, and event notification to proactive management of all units, network performance, report generation, and advanced analytics.

Gaining IT approval for wifi network access, as well as supporting and maintaining a stand-alone software and data server, can be challenging. It can also delay the deployment of the telematics solutions you need. Our cloud hosting services, combined with our cellular connectivity option, provide a simple, fast, and cost-effective alternative.

VX100/200 Hardware

- **Simpler, More Intuitive User Interface** – bigger screen (VX200), color-coded information and status LEDs, intuitive function keys and graphical icons are driver friendly
- **Vehicle Mounted Terminal Integration** – display UI on your existing VMT with VX100*
- **Ruggedness, Improved Power Management** – IP66 rating; 10V to 80V conditioning
- **Modular Design** – makes installation, service and upgrades faster, easier
- **WiFi or Cellular Connectivity** – flexible options depending on network requirements, capabilities

Cloud Hosting Services

- **Unmatched Data Security and Back-Up** – leverage world-class expertise and service from Rackspace®
- **Continuous (24/7/365) Support** – optimized database performance; software updates managed automatically
- **Flexible, Tiered Service Options** – from baseline remote unit monitoring to proactive operational support
- **Cloud Hosting plus Cellular Connectivity** – simple, cost effective alternative to IT Department approval challenges

The “TotalTrax Customer Experience”

No company can match the combination of solution flexibility, technical service, and experienced support that TotalTrax offers before, during, and after the sale and implementation of the SX/VX advanced telematics platform.

As a leader in telematics for more than 20 years, the sales and service professionals at TotalTrax understand the support required to successfully install, adopt, and get the most value out of an investment in monitoring technology. We use that experience before the sale to carefully assess your safety, operations, maintenance, and IT requirements and determine how to engage all stakeholders.

We manage the implementation process to adhere tightly to schedules and budgets. We devote significant resources to training operators and other employees until they are fully comfortable with the TotalTrax SX/VX platform. We understand that enterprise-wide change can be challenging. We help manage that change, providing active follow-up, and, if necessary, additional training so that all your stakeholders are confident in their ability to use the platform.

Active, continuous customer support is another capability that sets TotalTrax apart. The combination of safety and productivity improvements, cloud hosting, remote unit monitoring, and data analysis services that the flexible, scalable TotalTrax SX/VX advanced telematics platform delivers, gives our customers the confidence to add functionality and additional sites, knowing that they are getting a full return on their telematics investment.
