Conveying system

The beauty's in the efficiency

Consumers are virtually unaware of Frike, but their beauty products can contain Frike expertise. For its customers, the Swiss,

family-run company develops, produces and packages pharmaceuticals, chemical products and sprays. It also offers the right

finishing and logistics solutions for food-stuffs. But they need the right conveying technology – and in this case it's easychain. The conveying system is flexible in all directions and over a length of 44 m it heaves parcels up from the floor to a height of around 4.5 m in 0.45 seconds. At the same time the motor's 0.75 kW

capacity is not even fully required. easychain ensures the beauty's in the efficiency. As a result, Frike produces superb beauty products. Another key aspect is that easychain is made of materials that are resistant to chemicals and approved for contact with food.

The easychain conveying system

- needs just a few, easy-to-fit components
- has a drive that is flexible to position
- is simple to alter and extend
- achieves maximum conveying speed of 90 m/min
- can take up to 20 kg/m loads
- makes logistics processes efficient
- saves on investment outlay, as well as overheads, maintenance- and repair-costs
