Ultra-flat conveyor

denimove worker belt – exceptionally flat, long and strong

VW in Wolfsburg, Germany, has discovered ultra-flat conveyor denimove as a worker belt. denimove is really flat, and it's exactly that feature that makes it so strong. The motor is integrated into the drive shaft. This is another reason why denimove is so low – in Wolfsburg it's just 12 cm. As the modular belt doesn't slide, but

moves on roller bearings, abrasion and maintenance is reduced to a minimum. And at VW for example, rolling friction has literally halved energy consumption. The belt is 6 m in length and 1.2 m in width and needs just 0.18 kW. Even for a length up to 30 m, one single drive might be enough depending on the load.

denipro . . .

denimove improves ergonomics
for workers and significantly
cuts costs.

- it doesn't jolt
- it's only 120 mm in height
- it means energy savings of approx. 50%

- if required, maintenance is just 10 mins
- the motor's integrated into the shaft
