denirug®

Heavy-duty support system

*Val
d'OR*

Easy, gentle motion for fragile products

Of the 75 million free-range and bio eggs laid each year by the hens at Val d'Eurre in France, only a few get broken. One reason: the denirug heavy-duty support system. Val d'Eurre has purchased hundreds of denirug modules, each

with a length of 400 mm. Whether it's packages, pallets or box pallets, thanks to the roller rug, even loads up to one tonne can be shifted single handedly. Gentle on people, and gentle on the product.

denirug modules mean that eggs can be delivered according to their exact lay date. What's first to come in is first to go out.

In the heavy duty sector, denirug makes for processes that are new, leaner and unforeseen.

The denirug heavy-duty support system

- has no need for transfer points
- so operates reliably
- reduces wear and tear
- so maintenance is as good as zero
- has an ultra-low design
- is quick to install
- can be assembled to create conveyor rugs of almost any size
- lowers investment and operating costs
