Plate chain conveyor

TERUMO®

Cutting energy with 2 instead of 52 drives

Boxes at Terumo, the international medical equipment company, are pumped out virtually like blood through veins at the production site in Belgium. The layout

of the 376 m long deniway conveyor is impressive with its 15 in-feed and 4 out-feed points, with buffering as an additional function in between. Plate chain

conveyor deniway can handle it all with just two 2.2 kW drives. A conventional conveyor would need 52 drives and more energy and control functions to boot. When complex challenges become ingeniously simple, the investment quickly pays for itself.

The deniway plate chain conveyor

- offers huge energy savings with 2 instead of 52 drives
- pays for itself in very short periods of time
- requires minimal control/monitoring
- is robust, durable and low on maintenance
- fulfils the cleanroom requirement as specified by customer
- stylish material flow design
