Company

PRODUCT
- Seamless integration
- Inther LC modules
- PLC / PTL / RF techniques

PROJECT
- Complete turn-key project responsibility
- Short lead time
- Optimal price/quality ratio
- Personal dedication and commitment
- Logistic experience

ORGANISATION
- Automatize to optimize
- One-stop-shop
- Know-how: HW + SW
- Complete scope of delivery
- Development & implementation
- Service & support

Logistic automation cases vary enormously. This is why we provide custom-made solutions. Flexible solutions which enable you to reduce your costs while the capacity, productivity, occupancy, customer service and quality are increased. Typical values of our solutions which employ proven techniques are a short implementation time, flexibility, trustworthiness and a tangible fast pay-off time.

Inther is an international system integrator. We automate internal logistic processes by providing mechanized systems, manual solutions or a combination of both. Whether the solution is mechanized or manual, in both cases our own grown software, Inther LC, has a leading role in controlling the processes. Using standard components, this software will be fully customized according to your requirements.

Working methodology

Inther distinguishes herself by her complete approach. We take all aspects into account: from analysis, design, construction and acceptance to 24/7- service and - support. As a full service partner we like to be 100% committed and responsible for the system which we provide. Naturally, this system has been pre-conceptualised.

Logistic solutions

- Mechanization
- AS/RS
- Conveying Equipment
- Sorters
- Shuttle systems
- Pick to Light
- Pick to Cart
- Sort to Light
- Voice Picking

As a solution independent party, Inther can balance all the pros and cons of various logistic solutions in an objective manner. This ensures that the focus is not on supplying a specific solutions but on supplying the best solution which fits your requirements.

- **Complete project responsibility**
- **One-stop-shop**
- **Turn-key system supplier**
- **100% homegrown software**
- **Extensive experience in logistic automation**
- **Seamless integration into external systems**
- **Flexible approach**
- **24/7 service & support**

Data analysis

Starting from the very first conversation we have with our customers, there is only one question which keeps us occupied: what is the most fitting solution which fits the demands and wishes of the customer? Finding this solution starts with a thorough data analysis in which various factors, such as the order profile and the assortment, are analysed.

Design

We will create an extensive logistic design based on this thorough analysis and our profound knowledge of logistic processes. Things as layouts, process descriptions, the IT-landscape, budget prices and alternatives are all taken into account in that design.
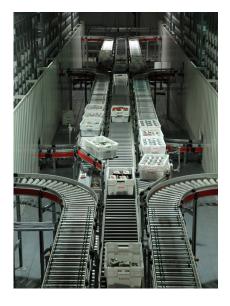

System integration

As soon as the logistic concept has been determined in the design phase, we will start immediately with the realisation of the project. A team of experienced project managers will be ready for you to complete your project from the beginning to the end. This also includes the onsite testing of the integrated systems, the training for your employees and go-live support, We won't leave the site before you are satisfied.

Service & support

We will also be ready for you after the implementation. We offer service & support which has been fully adjusted to your wishes and demands. Our helpdesk is available 24 hours a day, 7 days a week. The immediate actions of qualified service employees will ensure that you, the customer, will receive the most optimal support and a maximum availability of your system.

Support also means for us that we keep thinking about improving the system and that we will perform preventive maintenance. We will create analyses and reports of your notifications and we will propose improvements as soon as we see an opportunity for this.
