

Storage Solutions

META THE STORAGE SYSTEM

META THE STORAGE SYSTEM

■ Installation & Project Engineering

Customer service is the main focus at META. We have the capabilities and offer our clients to accompany a project from planning through to a successful launch of operations.

META can offer installation and state-certified project engineering services throughout the United States by cooperation with our reputable partners. This includes but is not limited to obtaining and organizing permitting as well as providing seismic- and other county-specific engineering solutions.

Made

in

Germany

We have been involved in metal working processes for more than 100 years. Our core products: the CLIP shelving systems and WIDE-SPAN racks are produced here and successfully marketed far across the borders of Europe.

META trains its own junior staff and thus lays the foundations for future success. With our **"Made in Germany"** quality seal, we don't just want to advertise. We also feel it is a duty and a requirement to provide you with quality products, both now and in the future.

■ Planning Service

Consultancy is a major priority at META. We can advise you in selecting the right racking system, or the optimal combination of different systems. To do this, your product structures and storage & picking procedures are inspected on site.

Our employees are well familiar with many trade sectors and can work out individual solutions, with the result that the storage facility is always customized to your requirements.

Our project engineers will be pleased to create a planning proposal for you, with an individual project proposal. With our current drawing programs, we can produce customer-specific CAD drawings.

Planning, production, supply and assembly – all from one source.

The META 5-year warranty

In addition to a **2-year warranty** required by German law, we provide an **extended 5-year quality warranty** on our shelving systems. **We have confidence in the quality of our products because: ...**

- ... we have our products and production processes inspected regularly by our own personnel and by independent inspecting authorities.
- ... structures and production processes have been approved by the GS symbol and the RAL-RG 614 quality label, both important especially in the German market.
- ... we are continuously renewing our production systems and use the very latest production technologies.

■ DIN EN ISO 9001 : 2008 certified

META offers you storage facilities of the highest quality, which are produced in machining centres using modern PPS and CAD/CAM technologies. As a leader in technology, META is certified to the **DIN EN ISO 9001: 2008** standard for warehousing and operating facilities.

■ RAL Certified META products are also certified to the strict RAL guidelines.

This means that they are constantly being checked and monitored by an independent inspecting body. And we welcome these independent inspections.

The function of the RAL (German Institute for Quality Assurance and Certification) is to ensure the high quality of products and services. As the umbrella organisation for the present 139 quality associations, only the RAL is allowed to award the quality label in Germany.

■ GS Testing & Inspection

Our products, of course, also carry the **GS symbol**, and are regularly checked and inspected by the neutral MPA (materials testing office) in Germany.
