

## ENHANCED CLIENT BILLING

### WHAT IS ENHANCED CLIENT BILLING?

---

Open Sky Group's Enhanced Client Billing (ECB) captures defined, billable transactions within the JDA Warehouse Management System, assigns client-specific charges based on the parameters set and creates an invoice. ECB is add-on module that works with the JDA WMS. **No additional servers or licenses needed!**

### WHAT ARE THE BENEFITS OF OPEN SKY'S ENHANCED CLIENT BILLING?

---

- **Captures all potential revenue**
  - Manual data entry errors or omissions can lead to lost revenue. ECB is configured to capture ALL billable transactions that happen within the JDA WMS.
- **Saves time**
  - No more exception handling hassles - charges are triggered off completion events like a work order closing or trailer complete so you can have confidence that finished work is getting billed.
  - Invoices can be emailed or printed with as much or as little detail as desired, with the option to send immediately or at a scheduled time.
  - Save time with features such as client cloning and transaction approval that can be turned on or off by client as needed, saving extra steps
- **Enhanced capabilities over standard client billing**
  - Billing charges can be received from other systems (i.e., time cards) and consolidated, then billed. ECB also integrates to Accounting systems.
  - Configuration allows for very simple or very detailed, client-specific rate structures.
  - Carriers can be assigned different charges and a separate parcel fee option is available as needed.
  - Reports allow for grouping charge details so it's easier to view totals by vendor and other criteria.
  - Use of Effective dates allows for smooth rate transitions, which can be set up in advance.
