

FoldSerter™ automates custom printed collateral to open box fulfillment orders prior to or after picking for customers who demand traditional plain-paper invoices or pack slips.

The system consists of commercial grade laser printer, automated folder mechanism, scanning, tracking and verification software along with various accessories and options.

FoldSerter™ identifies the package, prints and folds the collateral in real-time and automatically verifies the packslip against the carton to help achieve the perfect order, every time.

Compared to complex robotic systems, FoldSerter™ provides a smaller footprint and lower cost of entry for order fulfillment facilities who need to reduce labor and verify correct documentation. FoldSerter™ is an excellent choice for customers who need to display lots of information on packslips, such as high-line orders, or those needing substantial documentation / multiple fields for military or government applications.

## System Features

- Uses standard 8.5 x 11 in. office paper
- Automatically “Z” folds every invoice
- Standard Media Trays 1,500 sheets
- Breeze tunnels for box height variance
- Exception handling and standard reports
- Typical footprint 10 ft. long x 2 ft. width
- Easy maintenance and diagnostics via StreamTech software
- Operate in groups for redundancy or speed
- Server-side software parsing to multiple lines
- Color HMI
- Real-time Packslip scan check
- Extremely fast – up to 18 CPM

## System Benefits

- Good for high-line orders
- Reduce direct labor
- Save Cost
- Verify every order
- Speed fulfillment
- Compact – space efficient
- Increase quality
- Reduce manual touches
