

INVENTORY CONTROL

- ✓Track Inventory in the Supply Chain
- ✓Increase Efficiency in Transactions & Cycle Counts
- ✓Automate Receipt, Movement & More
- ✓Maintain Supplier Information
- ✓Increase Visibility to Inventory Values
- ✓Reduce Errors & Streamline Tasks

Inventory Control with Ultimate Flexibility

Radley Inventory Control fills the software gap for medium or large companies who need to manage inventory that either can't be tracked in their current system, are at separate locations or require control at a detailed and granular level. Integrate to compliment an existing ERP or back-end system to streamline inventory receipts, label printing, moves and cycle counts from the easy-to-use interface on your PC or hand-held mobile computer.

Avoid over- or under-purchasing, increase customer satisfaction and have the ideal stock levels at one or multiple locations, all visible through a single interface! Move beyond spreadsheets and manual data entry to reduce errors and streamline your business processes.

CORPORATION

Detailed Inventory Tracking

With Radley Inventory Control you will know in real-time exactly how much of each part, item, material or finished product is on hand, from the warehouse or on your desktop. It combines the ability to track finite, granular inventory details. Through easy-to-use desktop transactions or utilizing a hand-held device with a touch control UI, users can Receive, Issue, Move, and Transfer inventory.

- Set min./max. inventory quantities with alerts
- Expiration management
- Define item groups or classifications
- Multiple units of measure and conversion
- Manage supplier & customer information

Tailored to Your Process

Control your inventory in a way that works for you, not a rigid out-of-the-box system or strict adherence to an ERP's workflow. From configurable dashboards, to fields and labels that reflect your industry's terminology, Radley lets you setup the software to suit your needs. Convenient transaction prompts define where and in what order the data is populated in the system. Ideal for a diverse workforce, our multi-language interface, assigned by individual user login, is easily adaptable to your employees' needs.

With the latest security features to handle confidential and sensitive items, access to data is determined by user roles, configurable to certifications, skill sets, and transaction access. Radley's Inventory Control

can be used as a stand-alone solution or seamlessly integrated to your ERP or back-end business system; plus you can add other Radley solution modules as your organization grows and requirements change.

Flexible, Real-Time Reporting

In addition to pre-programmed standard reports, Radley's Inventory Control works with Crystal reports or your SQL database to provide customizable reporting of your inventory data. You can easily view audit trails—track transactions to order numbers, personnel activity, parts/materials, and more—and export your data to Excel or to your ERP or business system to keep KPIs available for key personnel.

Configure your dashboard to show you the real-time information you need to track inventory.

Features

- ✓ Set Safety Stock Levels
- ✓ Inventory Costing/Valuation
- ✓ Set Counting Rules & Tolerances
- ✓ Maintain Supplier Information
- ✓ Powerful Query & Search Options
