

FRED2500

MEET FRED2500

NOT YOUR TYPICAL AUTOMATED GUIDED VEHICLE

FRED is Simple

- Does not use WiFi or GPS
- Guided by a clearly marked magnetic tape path
- Easy to install and adjust path as needed

FRED is Flexible

- Leaves more open floor space than a conveyor
- Standard top fits a standard 40"x48" pallet, customization available
- Low profile – 11" height

FRED is Productive

- Eliminates need for worker to transport goods
- Solves labor shortage issues
- Affordable and cost effective compared to other AGVs
- 2500 lb capacity

FRED is Safe

- Maximum speed of 2.1 mph
- Blue lights on all sides
- Beeps when moving
- Limits dangerous tasks, which reduces worker compensation claims

HOW FRED WORKS

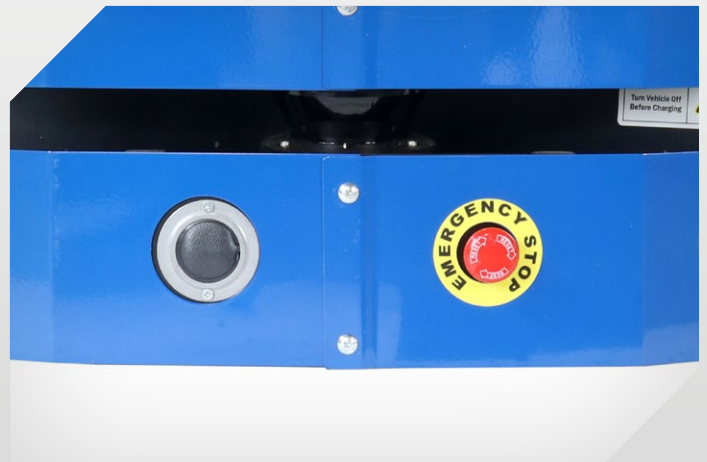

FRED is equipped with safety lasers that detect if an object is in FRED's path. If there is a forklift, pallet, worker, or anything in FRED's way, it stops.

FRED follows a path of easy-to-install magnetic tape, which can be protected from foot traffic and forklift wheels by safety tape.

A glowing blue light illuminates the ASI logo on each side of FRED, providing a safety light and a visual battery level indication.

FRED has two buttons on the front and back. The left button tells FRED to move away from you to the next destination on the path. The right button is an emergency stop button.
