## Park Industries Automated to Support Growth

Park Industries in St. Cloud, MN manufactures stone working machines that cut, polish and edge stone into slabs for commercial and home use. Growth driven by the granite countertop trend and introducing CNC plasma machines put a squeeze on the warehouse – literally. To accommodate growth, they installed four Vertical Lift Module Shuttle XPs with Power Pick Global (PPG) inventory management software.

Four Vertical Lift Module Shuttle XPs with Power Pick Global inventory management software and pick-to-light technology

Knowing they needed to improve efficiencies to support their growth, Park Industries turned to automation. They needed a solution: 1 – to utilize vertical height to create additional capacity; 2 – to deliver parts to the worker automatically to eliminate wasted walk time; 3 – that could be easily expanded to handle future growth; 4 – to integrate and communicate with their current ERP; 5 – to provide easy access to date for reporting; and 6 – that was user friendly. They were looking for a total solution – a combination of hardware and software – to improve warehouse fulfillment operations.

The warehouse today has four Shuttle XPs with pick-to-light technology integrated with PPG inventory management software. They installed the automated material handling solution in stages – starting with two Shuttle XPs, adding a third two years later, and a fourth after that. Within the same footprint and using the same labor requirements, the warehouse now fulfills twice the number of orders and has doubled inventory capacity.

Park Industries boasts over 5,000+ unique machine parts in stock with a next day delivery guarantee. This level of commitment requires a highly organized and efficient warehouse.

## Scope of Delivery:

- 4 Vertical Lift Module Shuttle XPs
- Power Pick Global inventory management software
- Pick-to-light technology

*“It’s critical we manage all parts efficiently – fast, medium and slow moving SKUs – when a customer needs it, we have to find it and it needs to be in clean, usable, working condition.”*

Mark Shankey, Warehouse Supervisor and Training, Park Industries
