

## Custom Tilter Improves Ergonomics for Aerospace Tooling for Assembly and Testing

### Features and Benefits

Autoquip's 90 Degree Tilter will help increase the customer's output and capacity to meet their production demands while focusing on ergonomics designed to improve efficiency and reduced worker fatigue.

### Challenge:

Aerostructure Systems Company specializes in the production of jet engine nacelle systems and thrust reversers, along with composite aerostructures for applications on commercial and military aircraft. In 2011 they purchased an Upender Tilter from us, and they are now looking to purchase a second one due to production demands.

### Solution:

Autoquip has experience building several of these types of tilters for this customer, but each project has required a modification to fit the application requirements. For this particular model, we built up the platform sides and added (2) load locking devices with proximity switched for load and lock detection. The customer will load their tooling onto the platform and the lock devices will secure and hold the tooling in place while the equipment is tilted 90 degrees.

### Specifications:

- 90 Degree Tilter
- Model: TLT-091068-0030-90-SP
- 5,000 Max Lifting Capacity
- (4) Strobe Lights for operational safety
- (2) TECSPAK bumpers

- Adjustable landing feet
- AQ# 149004
- PN: 9TLT-51556-1

**Benefit:**

Autoquip's 90 Degree Tilter will help increase the customer's output and capacity to meet their production demands while focusing on ergonomics designed to improve efficiency and reduced worker fatigue.
