

“Batch handling monorail system improves productivity”

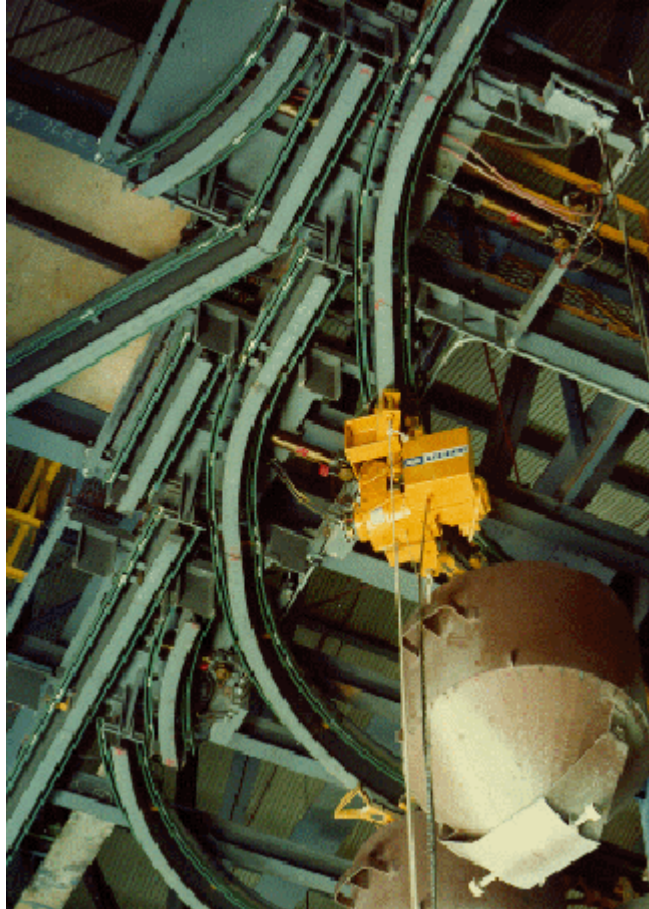

**Features and Benefits**

Fully Automatic

Computer Integrated

Allows 24 hour continuous operation

**Industry Group:** Monorail Manufacturers Association, Inc. (MMA)

*“We needed a dependable system to assure us continuous production and our LOUDEN monorail system is a rugged system that does the job.”*

To meet the growing customer demand, Carr-Lowrey Glass Company installed two new furnaces. LOUDEN designed this system to constantly supply the furnaces with raw materials 24 hour continuous operation.

Operating only one shift, the batch room fills enough buckets to supply the furnaces for 24 hours. Some buckets go directly to the furnaces, where they automatically discharge their load into the furnaces. Others are stored on the six full-bucket storage lines in front of the furnace fill lines.
