

Operators More Productive with Addition of Wall Bracket Jib Crane

Features and Benefits

With workers rotating in and out of different jobs along the production line, the company needed something that was easy to use and easy to learn. The ease of use of the jib with the vacuum lift made it perfect for this work force.

With the addition of the Gorbel Work Station Jib, UTC Retail was able to hit production goals and improve safety goals.

"People pick it up within the first 15 minutes and they're off and running with it", said Dave Lyon the Production Supervisor.

Industry Group: MHI INDUSTRY GROUP

UTC Retail is a Western New York company that specializes in multichannel enterprise software, point of sale hardware and software, and hardware depot services.

The company received a large order for point of sales systems for a large chain of home improvement stores. In this work cell, workers take fully assembled cash registers weighing 100 lbs, slide them down a conveyor to a banding station to be banded, then lift them onto shipping pallets.

The Problems:

- Manually lifting and moving 100 lb. boxes
- The process took two people
- Wanted to be proactive in preventing injuries from repetitive lifting

To further increase efficiency, they bought a Gorbel Work Station Jib Crane with a vacuum lifter to move the 100lb boxes from the banding table to the pallets, making what was once a 2 person job into a 1 person job.
