

## Wildeck's Pivot Gates Enhance Facility Safety and Efficiency

### Features and Benefits

- Innovative safety gate
- Safe and efficient transfer of palletized loads
- Compliance with OSHA's elevated ledge regulations

**Industry Group:** Protective Guarding Manufacturers Association

“I would definitely recommend Wildeck. This has been a good experience.”

Ron Harris  
VP of Real Estate, Construction and Facilities for Young Living Essential Oils

*Through the installation of Wildeck's Pivot Safety Gates, Young Living was able to safely and efficiently move products from their mezzanine.*

Due to a surging demand in the wellness market, Young Living Essential Oils (headquartered in Lehi, Utah) experienced an expansion dilemma. In order to keep pace with the market's growing demand, a Wildeck mezzanine (measuring 136' x 55') was installed inside the company's building to extend the life of the facility. Over the course of the company's renovation journey, it became evident that safety equipment that protected employees from the mezzanine's elevated ledge was needed. Through their partnership with a trusted Wildeck dealer, Young Living was exposed to an innovative safety gate that would allow the safe and efficient transfer of palletized materials to and from the steel work platform.

Unlike other gates in the material handling marketplace, Wildeck's Pivot Safety Gate is a true safety gate. As one side of the Wildeck Pivot Safety Gate is raised, the other side closes, keeping the elevated ledge protected at all times. This functionality meant that Young Living would not have to depend upon employee diligence to ensure that the gate was closed following the transfer of pallets to and from the mezzanine. Additionally, forklifts and employees would be able to quickly and easily access the merchandise being moved to and from the mezzanine's deck. Wildeck is proud to have helped Young Living achieve their safety goals.
