

MOBILE CONVEYOR

CCS's brand-new Mobile Conveyor consists of pre-tested and pre-wired 24vDC run-on-demand MDR Conveyor Lines mounted on casters. These conveyor modules come in a variety of sizes to fit any product. You can save time and money by downsizing your conveyor system during non-peak seasons simply by unplugging your Mobile Conveyor pieces and rolling them to a storage area in your facility. When it's peak season again, simply roll them back out, plug them in and you're ready to start up again.

CASTER MOUNTED

CCS's Mobile Conveyor runs on our trusted 24vDC run-on-demand technology mounted on casters for quick, easy reconfiguration of your conveyor system.

SCALABLE AND FLEXIBLE

The entire idea behind Mobile Conveyor is to give you the flexibility they need to easily adjust your systems to meet changing throughput needs.

RUN-ON-DEMAND

Conveyor zones stop running if there is no product to transport in that zone, reducing operational cost and extending product life.

PRE-WIRED AND PRE-TESTED

All of our Mobile Conveyor is shipped pre-tested and pre-wired, making installation as easy as can be. It arrives fully assembled, all you need to do it is plug it in and start your system up.
